Kennedy High School	Advanced	985

Monthly Report

The 985 car's team started off the 2025 season in Lacrosse doing 47 laps in the first heat alone before it bent its motor control and had to sit out of the second heat entirely. After this mishap steps have been taken to more securely attach the new control, along with a new battery tray. In the next month there was a lull in the working progress as the team waited for new metal and vinyl materials, but during this time where they were unable to work on the car they spent the time making a new nose and firewall, while also fully redesigning the tail that is now in progress being built.
