School	Car Class	Car Number
Kennedy High School	Standard	984

Monthly Report

In these past months a lot has been done to the 984, when the 984 team first started working on the car the team took apart all the necessary pieces they would need to build the new and improved car. The 984 team has been spending these past months building the new frame for the car, the idea behind the new frame is almost a coffin shape with the team working with their sponsor Next Era to install solar panels on the tail of the new 984 to see how they will give an advantage. The 984 team along with their teacher have been working on getting interior items out into the car like the mounts for seat belts, throttle, brakes, and the front axle along with pedals being put in place. As the 984 team works they will need to build the new tail in a way where the solar panels will get enough energy to add voltage onto the batteries they will be using. In these upcoming months the team will work to finish the new 984 and testing volts and the power of the solar panels.
