School / Car

Kennedy A983

Monthly Report

The month of February has been very productive for the 983 cars team, the first thing the team did this month was finish building the frame of the canopy, due to complications with spacing it was decided that instead of doing the hinge attachment to the car as originally planned it would be better to use velcro instead. It was also decided that a new firewall and belly panel would be required to meet safety requirements, once both of those were attached to the car the team went on to re-pad the car with foam and electrical tape. Currently the 983 car's team is working on building the body, the panels have already been cut out of vinyl and shaped but are awaiting paint before they are riveted onto the car.
